

UROLOGICAL WORKING PLACE

ABSTRACT OF THE DISCLOSURE

A urological working place is provided that can include a U-bow with an x-ray source arranged at one end and an image processing device arranged at the other end, wherein the image
5 processing device cooperates with the x-ray source. An examination table is releasably secured to the U-bow and replaceable by an alternate examination table that is independent of the movements of the U-bow. The x-ray source and the image processing device are displaceable relative to the U-bow individually and synchronously in a transverse direction, and the U-bow is supported in a lower area thereof so that it is tiltable in the longitudinal direction of the
10 examination table.
